

Strike While the Planet Is Hot

Stop the Ecocidal Maniacs

Wealthy fossil fuel profiteers continue peddling and expanding the use of their deadly products, decades after scientists warned us this would lead to climate collapse.

That terrible event is happening now.

The oily death merchants control governments and policy by funding politicians and their campaigns. They are killing us and killing Nature Herself.

We won't let them finish the job. We are ordinary sane people who love our children and our planet. We will NOT allow either to be sacrificed to satisfy the greed and power lust of an unworthy few. The number of the destructive few is in the *thousands*. The sane caring people number in the **billions**.

Through disobedience and strikes and noncooperation, we will remove destructive forces from power and put climate scientists and young climate activists in charge of a **worldwide emergency program** to limit and reverse the terrible damage the climate vandals have already done.

This is just the beginning—we are increasing our visibility to those who care but have been silent, who feel lost, alone, fearful and even defeated.

We are not defeated. **We are finding each other.** And we are determined to rescue Nature and humanity. We hope you will do your part.

Please copy this flyer and post copies at or near gas stations. This action is set to begin August 1st, 2023, and will continue until the climate crisis is over.
